YOUR FIRST POINT OF PATIENT CARE

By operating healthcare parking facilities for over 40+ years, Impark Health has developed a sector-specific division directly responding to the parking requirements of hospital environments. In addition to a healthcare-focused set of operating best practices, ImparkHealth embodies a philosophy that enables a hospital's parking and transportation services to become part of the continuum of actions and services contributing to a superior patient experience your first point of patient care.

Impark Health has developed a deep understanding of the unique operational challenges facing healthcare campuses. We respond appropriately to anxious patients and visitors, maintain patient safety, and understand the need for efficient allocation of valuable parking resources while ensuring staff and physicians quickly get to where they are most effective.

We combine this operational awareness with a profound belief that the environment of care should extend beyond the walls of the medical building and shape the patient and visitor experience from their first moments on hospital grounds. Frequently, this experience begins and ends with parking.
